#### ABSTRACT

Determining the imperative educational needs in the State of Nevada constituted the general purpose of this study funded under Title III of the Elementary and Secondary Education Act. Utilizing the 1969 Wisconsin Educational Needs Assessment Study instrument, the study sought to evaluate educational needs in terms of subject fields to be taught, level of education needed in the various school districts, pre-vocational and occupational programs, teacher personnel concerns (e.g., salaries), administrative and pupil services, budget allocations, instructional approaches, educational programs, and inservice education. After a discussion of the foregoing areas of need, composite educational needs representing the sample population (n=451) -- school board members, educators, students, and citizens from urban, rural, and remote areas--are noted. It is concluded that reading, education in motivating and guiding pupils, diagnosing puril needs, individually guided instruction, and teacher personnel are among the high-priority items in planning for education in Nevada. Two appendixes, 28 tables, and 13 figures illustrate the report. (MJB)

## MEMORANDUM

October 26, 1970

\_\_\_,

FROM:

TO: Citizens of Nevada

Burnell Larson, Superintendent of Public Instruction

SUBJECT: Education in Nevada: An Assessment for 1970

This document has been prepared for distribution by the Nevada State Department of Education. It is the second study made by the Department of Education in a continuing effort to assess educational progress in Nevada. It is another step toward the goal of establishing an ongoing assessment and evaluation of educational progress, teacher effectiveness and student performance.

The Assessment was designed as a perceptual study to determine how a selected group of respondents feels about the relative need for emphasis that should be given to various aspects of the public school operation. Educational policies cannot be derived directly from polled opinions, but when they are corroborated by findings of related studies, such information can assist the Department of Education and other policy-making agencies in management decisions, program planning and allocation of funds.

Conclusions and implications of the Assessment call for action to which the Department of Education and school districts can respond. Immediate action can be

taken by updating appropriate parts of the "Maste curriculum priorities, developing in-service train patterns and improving recruitment practices.

Data from the sudy, in combination with prevent provide the Department's new Planning and Evaluation statewide information system. This information with model for the continuous assessment of educational performance.

"Master Plan for Education," assigning new ce training programs, reviewing staffing ces.

with previous assessment information, will Evaluation Division data needed for a mation will also assist in the design of a ucational needs and evaluation of student

## **ACKNOWLEDGMENTS**

It has been our pleasure to work once again on a cooperative venture with the Nevada State Department of Education Assessment Committee. Their guidelines for the project, timely discussions concerning project progress, and review of the rough draft of the report were valuable to the research staff. Many thanks to the following members of that Committee:

Mr. Robert Best, Chairman Mr. Merlin Anderson Mr. James Costa Mr. John Gamble Mr. Denis Graham Mr. James Kiley

Mr. LaMar LeFevre
Mr. Robert Lloyd
Mr. James Menath
Mr. Tom Ogg
Dr. Kay Palmer
Mr. Harvey Thiel

The Research and Educational Planning Center appreciates the wholehearted cooperation of all project interviewees throughout the State of Nevada who provided the atial information for this project.

We also wish to acknowledge the excellent work accomplished by our staff interviewers who spent many hours traveling throughout the state to complete their interviewing tasks.

The Research office staff is commended for the excellent typing, format and technical work on the report.

J. Clark Davis, Director
Research and Educational Planning Center

aid in answering the following specific questions:

e educational needs in Nevada as perceived by school rs, students, and selected citizens?

- 2. What priorities are assigned to specific and composite educational needs in the State of Nevada?
- 3. How are the need priorities distributed in the Urban, Rural, and Remote Rural areas of the State?

### Procedures of the Study

Since it was the desire of the State Department to replicate the 1969 Wisconsin Study, several preliminary meetings were held between State Department and Research and Educational Planning Center personnel in order to adjust the procedures of the Wisconsin Study to the State of Nevada. Strategies for sampling methods, choice of respondents within each school district, adjustment of the interview instrument, and procedures to be used to gather and process the data were carefully planned.

### School Districts Included in the Study

In order for State Department staff to be able to identify regional and state-wide educational needs, the criteria used in the 1969 Nevada assessment were applied in this study. (See Education in Nevada: An Assessment, 1969, pp. 3-5.)

In essence, the geographic areas included are Urban, Rural, and Remote Rural. Those districts with less than three hundred students in grades nine through twelve are classified as Remote Rural districts. All of the rest of the districts of the State are designated as Rural except Clark and Washoe County school districts which are designated as Urban.

## Respondent Groups

The selection of the sample population followed the types of respondent groups used in the Wisconsin Study. These four groups included the following types of individuals: school board members, professional educators, students, and citizens.

School board members were included because of the importance of their decision making role in matters concerning educational policies in the State. Two board members in each district were selected for interview: the board president, who usually has considerable experience, and the newest board member, who would reflect the more recent concerns expressed by constituents. 1

Since "professional educators" is not a homogeneous grouping, respondents were sought from both administrative and teaching ranks. It was decided to interview the superintendent of schools in each of the districts, a random choice of principals or vice-principals, and teachers chosen randomly within each district. <sup>2</sup>

Student opinions were sought from seniors scheduled to graduate in 1970, and these students were randomly selected in each district.

The citizen group included an elected official, the president of the parentteacher organization, and a member of the press--a reporter or editor.

ween the various districts of the State, it was deewers. One team covered the northern part of the in the southern part of the State.

were conducted for these teams. During the first n team, a sub-committee of the State Department der to be a part of the interview training and to ew instrument.

a complete briefing on the background and purpose g by Dr. James Lipham, director of the Wisconsin rview kits which included a guide, ten sets of cards the ranking of the cards. After a demonstration, through the complete interview, noting any items hey were then asked to practice interviewing each. After these practice sessions, they were given uestions to the sub-committee of the State Depart-

raised by the interview team, some revisions were and interview guide. Except for the presence of the nidentical training session was held for the

The interview team then conducted a pilot testing of the instrument and procedures of the interview. Only minor changes were made.

## Treatment of the Data

The interview data were coded and keypunched by Research and Educational Planning Center personnel. Each interview was represented by two punched cards, and the two cards for each interview were coded so that the county, role of respondent, and card sequence could be easily identified. The cards were computer edited to insure that the completed data were logically consistent with the interview instrument.

The coding procedure provided for simple data partitioning. The respondents were divided in two ways: first by the role of the respondent which resulted in four groups, each of which consisted of one or more respondent roles. See Figure 1.

The second division of respondents was by the county of the respondent which generated three groups, each of which contained several counties. This is illustrated in Figure 2.

## Summary

In this chapter the objectives and procedures of the study have been reported. In Chapter II, the results of the treatment of the data by specific educational needs will be presented: in Chapter III, a further analysis of data shows the composite ranking of educational needs. Conclusions and implications of the study are reported in Chapter IV.

#### CHAPTER II

### SPECIFIC EDUCATIONAL NEEDS

In order to determine the most imperative educational needs in the State of Nevada, respondents were asked to rank 100 needs; ten in each of ten categories, according to the amount of additional emphasis they felt each need should receive. In this chapter the results of these rankings by school board members, educators, students, and citizens are examined.

These groups were then divided into the geographic areas -- Urban, Rural, and Remote Rural -- represented by each of the respondents, and a second analysis of responses is reported.

A narrative and graphic reporting of the findings of the interviews are given in each of the following categories: Subject Fields, Level of Education, Vocational-Technical Programs, Teacher Personnel, Administrative Services, Pupil Services, Budget Allocations, Instructional Approaches, Educational Programs, and In-Service Education.

## Category I: Subject Fields

Of all the Subject Fields, Reading was ranked by all groups of respondents as the subject needing the most additional emphasis. English (Language Arts) was

second for all groups except Citizens who ranked Mathematics (Arithmetic, Algebra, etc.) second. The average ranking of all groups placed Mathematics (Arithmetic, Algebra, etc.) third; Science (General Science, Biology, etc.), fourth; Vocational-Technical (Office, Agricultural, etc.), fifth; Social Studies (History, Geography, Government, etc.), sixth; Industrial and Practical Arts (General Shop, Homemaking, etc.), seventh; Fine Arts (Music, Art, Drama), eighth; Physical Education, Health and Safety Education, ninth; and Foreign Languages, tenth.

Generally, respondent groups were in agreement on their ranking of the Subject Fields (see Table I). The priority assignments of Citizens and Students differed somewhat from the total picture: Citizens gave a higher priority to Social Studies and a lower priority to the Fine Arts, and Students ranked Industrial and Practical Arts lower and Foreign Languages higher than the overall average. Figure 3 illustrates how the pattern of priorities was repeated by the geographic areas.

It is to be noted that the Remote Rural areas also gave a higher priority to Foreign Languages (Table II).

Clearly Reading is considered the most imperative Subject Field need in the State of Nevada.

Figure 3. Ranking of Subject Fields by All Groups and Geographic Areas

# Category II: Level of Education

In order to determine at which level of education to needed, the sample population was asked to rank ten level ment among the groups in assigning priorities to these

While the average rank for all groups places the Julian the first priority, none of the groups ranked this letton (Grades 1-3) was ranked second by average rank, how level sixth and Students ranked it ninth. Except for Schoser agreement in third place Post-Secondary Vocation siderable differences among the groups in placing Senior fourth rank: Students and Citizens rated this level as for the fifth-placed level was the Intermediate Level, at this level first priority and Students ranked it sevents.

With continued differences among the groups, Communigiven an average rank of sixth position; Kindergarten, eighth; Early Childhood, ninth; and University Education

These data, as illustrated in Table III, clearly sho among the groups. Priority of needs by level of educations assign.

## II: Level of Education

ich level of education the most additional emphasis is as asked to rank ten levels. There was little agree-ing priorities to these levels.

all groups places the Junior High School (Grades 7-9) the groups ranked this level first. Primary Educacond by average rank, however, Citizens ranked this it ninth. Except for School Boards, groups were in Post-Secondary Vocational-Technical. There were congroups in placing Senior High School in an overall zens rated this level as first priority. The average the Intermediate Level, however, School Boards gave tudents ranked it seventh.

among the groups, Community College Education was position; Kindergarten, seventh; Adult Education, and University Education, tenth.

in Table III, clearly show the lack of agreement needs by level of education would be difficult to

As with the respondent groups, none of the geographic areas placed the Junior High School in first position. Both Urban and Remote Rural areas gave the highest priority to the Primary level. These areas, Urban and Remote Rural, tended to be in closer agreement in assigning a rank order to Levels of Education than the Rural area (Table IV).

The priority assignments of all groups and geographic areas as shown in Figure 4 illustrates further this lack of agreement.

Figure 5. Ranking of Pre-Vocational and Occupational Program by All Groups and Geographic Areas

### Category IV: Teacher Personnel Concerns

All groups gave first priority to the Quality of Teacher Candidates as an expression of concern regarding teacher personnel, and all groups agreed that Teacher, Militancy was the matter of least concern. Evaluation of Teachers was second; Teacher Utilization and Specialization, third; Ineffective Teachers, fourth; Methods of Teacher Selection, fifth; Teacher Involvement in Decision Making, sixth; Teacher Salaries, seventh; Supply of Teacher Candidates, eighth; and Teacher Turnover, ninth.

As shown in Table VII, Educators and Students were less concerned with Evaluation of Teachers than were School Boards and Citizens. Educators and Students were more concerned with Teacher Utilization and Specialization. Educators were much less concerned with Methods of Teacher Selection than were Students and Citizens. Educators were more concerned than any other group with Teacher Involvement in Decision Making, and, of all groups, were the least concerned about the Supply of Teacher Candidates.

As further shown in Table VIII, the Remote Rural area differed in the assignment of needs more often than the other areas. Urban areas differed most from the average in the low priority given Teacher Utilization and Specialization, and a higher priority for Teacher Militancy.

Figure 6 illustrates the comparison of rankings among the respondent groups and the geographic areas.

Figure 6. Ranking of Teacher Personnel Concerns by All Groups and Geographic Areas

### Category V: Administrative Services

In the area of administrative services, Curriculum Development was given first priority by all groups except Students who ranked this third. Long-Range Program Planning was given an overall ranking of second, but Students and Citizens rated it sixth and fourth. The third rank was given to Pupil Personnel Services with major differences among the groups--School Boards ranked this as seventh, and Students ranked it first. There was more agreement among the groups regarding fourth-ranked School-Community Relations and fifth-ranked School Facility Planning.

There were differences among the groups with the overall ranking of Supervision of Instruction as sixth: School Boards and Citizens considered this the second area of concern and Educators ranked it eighth. Except for students, there was more agreement among the groups in ranking Research and Evaluation seventh. Staff Personnel Services was ranked eighth, with only Educators considering this of greater concern. There was unanimous agreement among the groups in assigning Business Management to ninth rank and Data Processing tenth. (Table IX)

On the whole, the assignment of needs by the geographic areas (Table X) resembles the overall rankings of the respondent groups. Rural areas were less concerned with School Community Relations and more concerned with Facilities than the average

of the groups, and Remote Rural areas were less concerned with Long-Range Planning than the average.

Figure 7 illustrates the differing priority assignments in this category.

Figure 7. Ranking of Administrative Services by All Groups and Geographic Areas

### Category VI: Pupil Services

The priorities assigned by the total sample for services to pupils placed Elementary School Guidance first; Junior High School Guidance, second; In-School Placement of Pupils, third; Educational-Vocational Placement, fourth; Information on Careers and Occupations, fifth; Psychological Testing and Referral, sixth; Achievement Testing, seventh; Social Work, eighth; School Health, ninth; and Follow-up of Graduates, tenth.

Inspection of data shown in Table XI shows some significant differences among the groups in ranking these areas of services. Only Educators ranked Elementary School Guidance first—Students ranked this sixth. School Boards and Citizens ranked Junior High School Guidance first while Educators and Students rated it lower. Educators gave a much higher priority to the In-School Placement of Pupils than did the other groups, and Students gave Educational-Vocational Placement a higher ranking than the other groups. Educators gave a significantly lower rating to Information on Careers and Occupations than did the other groups—Students ranked this first. Educators gave a priority of third to the sixth-ranked Psychological Testing and Referrai, and Educators and Students ranked Achievement Testing much lower than did School Boards and Citizens. School Boards rated Social Work last, and like Students, gave Follow-up of Graduates a higher rating than the overall rank of this service. School

Boards and Students most often deviated more than one rank from the average in this category, but all groups perceived the needs in pupil services differently.

When ranked by geographic areas, it was found that Urban areas were more concerned with Psychological Testing and Referral than the average, and less concerned with Educational-Vocational Placement. Rural areas were least concerned with Achievement Testing, and Remote Rural areas gave Social Work tenth place. Remote Rural areas were also less concerned with In-School Placement of Pupils than the other areas (Table XII).

Figure 8 shows the differing priority assignments in this category.

Figure 8. Ranking of Pupil Services by All Groups and Geographic Areas

#### Category VII: Budget Allocations

As shown in Table XIII, the first overall priority in the educational budget was given to Teaching Personnel, with only Educators actually ranking this first. Text-books and Instructional Supplies ranked second, and Classroom Facilities, third. Fourth, fifth and sixth priorities were assigned to Libraries and Instructional Center Facilities, Specialized Personnel (Counselors, Psychologists, Social Workers, etc.), and Audio-Visual Equipment. Supportive Personnel (Clerical, Aides, etc.) ranked seventh; Building Maintenance and Operation, eighth; Administrative and Supervisory Personnel, ninth; and Transportation, tenth.

Since School Boards are responsible for reviewing and approving school budgets, a closer inspection of the priority assignments of this group is in order. School Board members gave the top priority ratings to Textbooks and Instructional Supplies, Teaching Personnel, and Libraries and Instructional Center Facilities. Respondents in this group differed more than one priority rank from the average by assigning Supportive Personnel to ninth position, and are more concerned with Building Maintenance and Operation than the other groups.

Of the geographic areas, only Rural areas gave top priority to Classroom Facilities, and Remote Rural areas were less concerned with Supervisory Personnel than the overall average (Table XIV). In other budget concerns, the geographic areas ranked

4 C

the items as did the respondent groups. Figure 9 illustrates the comparison of rankings in this category.

Figure 9. Ranking of Budget Allocations by All Groups and Geographic Areas

# Category VIII: Instructional Approaches

In this category, opinions were sought regarding the need for ten different instructional approaches to education.

All groups rated Individually Guided Instruction as the first priority in this category and Computer Assisted Instruction as the Instructional Approach of least concern. While Instructional Aides and Resource Persons were rated second by the combined groups, Students and Citizens rated this fourth. The average ratings placed Inquiry Approach (Discovery Method of Instruction) third; School Boards did not give it this importance. Group ratings were close in assigning an average rating of fourth to Staffing Patterns (Team Teaching, etc.), and the overall rating for Flexible Scheduling was fifth. (Students thought this was more important and rated scheduling third.) School Boards and Citizens agreed in assigning a lower rank of eighth to Non-Graded Program, which had an average rank of sixth.

T.V. was given an average ranking of seventh--School Boards and Citizens ranked this a place or two higher. Groups were not too different in their overall placement of Television Assisted Instruction as eighth and ninth-placed Homebound Instruction.

(See Table XV.)

An illustration of these rankings is shown as Figure 10.

It is seen that by geographic areas, Urban areas rated Instructional Aids and Resources lower than average and Computer Assisted Instruction higher. The Remote Rural

Rural areas showed greater concern for the need for Audio-Visual Instruction than the other areas (Table XVI).

An illustration of these rankings is shown as Figure 10.

Figure 10. Ranking of Instructional Approaches by All Groups and Geographic Areas

### Category IX: Educational Programs

In this category respondents were asked to rank the need for additional emphasis hat should be given various types of educational programs. As shown in Table XVII, tudents most often differed from the average ranking. Of the ten types of programs anked, Students perceived six areas differently than the average for the combined However, all groups gave first priority to Program for Slow Learners and were n close agreement in assigning Program for Alienated Youth (Potential Dropouts, Unotivated, etc.) in second place. The average ranking for Program for Academically alented was third with Students and Citizens rating this lower. The average rating or the fourth rank was Program for Educationally Disadvantaged--School Boards rated his type of program sixth. Fifth-ranked was Program for Average Pupils: School oards ranked this second, and Students ranked it ninth. While Students rated Program or High School Terminal Students eighth, this received an overall rank of sixth, and rogram for Emotionally Disturbed had an average ranking of seventh. Eighth-ranked rogram for Mentally Handicapped (Trainable, Educable, etc.) was placed third by Stuents, and ninth-ranked Program for Physically Handicapped (Visual, Orthopedic, etc.) as rated higher by Students and Citizens. Program for Culturally Distinct was rated enth.

When this category is viewed by geographic areas, only Urban areas deviated more han one rank from the average of the respondent groups by assigning Mentally

Handicapped to last place (Table XVIII). Figure 11 is an illustration of the differing priority assignments in this category.

Figure 11. Ranking of Educational Programs by All Groups and Geographic Areas

### Category X: In-Service Education

In-service education includes those types of activities and programs directed toward improving and updating professional personnel. As shown in Table XIX, rankings of the groups were quite similar in designating Education in Motivating and Guiding Pupils first priority; Education in Diagnosing Pupil Needs, second; Education in Planning Instruction and Developing Curriculum, third; and Education in Student Program Evaluation, fourth. The average of all groups ranked Education in Group Dynamics and Human Relations fifth, however, School Boards and Students ranked this lower. School Boards ranked Education in Classroom Management fourth, but the total group rankings placed this area sixth. Groups were quite close in ranking Education in Selecting and Utilizing Materials and Equipment seventh, but the overall eighth-place ranking to Education in Subject Matter Content showed differences among the groups; Educators gave this a higher priority. The groups were nearly consistent in ranking Education in Varied Staffing Patterns (Team Teaching, etc.) ninth, and Education in Reporting Pupil Progress tenth.

Inspection of Figure 12, shows that for Urban areas Group Dynamics was of greater concern and Education in Classroom Management of less concern than the average rankings for geographic areas. Group Dynamics was of lesser concern to the Remote Rural areas. (See Table XX).

Figure 12. Ranking of In-Service Education by All Groups and Geographic Areas

# Summary

In this chapter specific educational needs have been identified. Rankings by respondent groups have been given as well as the rankings of these groups when arranged by geographic areas. A composite picture of Educational Needs in the State of Nevada is reported in the next chapter.

### CHAPTER III

#### COMPOSITE EDUCATIONAL NEEDS

A picture of respondents' overall perceptions of imperative educational needs was obtained by having each respondent rank, from one to ten, each of the ten items to which he had given first priority in each of the ten categories of need discussed in Chapter II.

Data pertaining to the 15 imperative educational needs which were given the highest overall rankings by the total number of respondents are reported in Table XXI. In this table the number of respondents who ranked each of the needs first, second, third, and fourth, together with the weighted totals and final ranks, are given. To obtain the weighted final ranks, first choices were multiplied by four, second choices by three, third choices by two, and fourth choices by one.

Reading was the preponderant choice of the respondents as the outstanding imperative educational need: The weighted total for this need was almost three times that for the second ranked need. Education in Motivating and Guiding pupils and Teaching Personnel were ranked as second and third imperative educational needs. These areas received fairly similar weighted totals and were given the same number of first choice

Education in Diagnosing Pupil Needs and Individually Guided Instruction ranked fourth and fifth with less difference between weighted totals than between the thirdand fourth-placed imperative needs.

TABLE XXI

COMPOSITE RANKING OF PERCEIVED EDUCATIONAL NEEDS IN ALL CATEGORIES BY THE TOTAL SAMPLE

EDUCATIONAL NEED	NU ———	MBER OF RANKING			WEIGHTED	
	FIRST	SECOND	THIRD	FOURTH	TOTALS	RANKS

Non-Graded						
Program	11	6	11	9	93	14
Early Childhood						
(3-4 Year Olds)	9	10	6	8	86	15

Therefore, according to the perceptions of the respondents in this survey, the ive most imperative needs in education in the State of Nevada are: Reading, Education in Motivating and Guiding Pupils, Teaching Personnel, Education in Diagnosing upil Needs, and Individually Guided Instruction.

Little differences are found in the weighted totals of the next five ranked mperative needs. These are: Primary Education, Quality of Teacher Candidates, chool-Community Relations, Classroom Facilities, and Curriculum Development. The eighted totals for the last five ranked needs again showed little, if any, differnces. These are: Program for Slow Learners, Elementary School Guidance, Ineffective eachers, Non-Graded Program, and Early Childhood Education.

A composite ranking of perceived educational needs in all categories by espondent groups affords a closer inspection of the overall ranking as shown in able XXI.

## School Board

As shown in Table XXII, School Board Members ranked Reading as the most imperative educational need. The weighted total for this priority is over twice s much as the second ranked need, Education in Motivating and Guiding Pupils. eaching Personnel ranked third, and sharply deviating from the total sample, these espondents rated Education in Diagnosing Pupil Needs last. School Board Members

						<del></del>

anked Evaluation of Teachers fourth. Their ranking of the next four needs did not eviate more than one rank from the total sample as they placed Quality of Teacher andidates sixth, Primary Education seventh, and School-Community Relations eighth.

This sample differed from the composite of the total sample by ranking neffective Teachers, Early Childhood Education, and Classroom Facilities next in rder, and were the only group to add Evaluation of Teachers, Program for Average upils, Jurior High School Education, and Building Maintenance and Operation to the ist ranked by the total sample. School Board Members did not include Curriculum evelopment, Program for Slow Learners, Elementary Guidance, and Non-Graded Program.

Except in giving first priority to Reading, the weighted totals for the other anks do not differ greatly.

### Educators

The composite ranking of the sample of Educators is reported in Table XXIII. Reading was given first priority almost three times greater than the next area of concern, Teaching Personnel. Curriculum Development was ranked third, Primary Education was fourth, and Education in Diagnosing Pupil Needs was fifth. Curriculum Development and Primary Education were not ranked in the top five needs of the composite of the total sample.

Education in Motivating and Guiding Pupils ranked sixth with Educators; Non-Fraded Program, seventh; and Individually Guided Instruction, eighth. This was the

only sample group to mention Teacher Involvement in Decision Making, and they did not include Ineffective Teachers.

### Students

As illustrated in Table XXIV, the weighted totals for the responses of the sample of Students do not differ greatly from one rank to the other. Students gave top priority to Reading, University Education, Program For Slow Learners, Education in Motivating and Guiding Pupils, and Education in Diagnosing Pupil Needs.

They gave a low rank to Teaching Personnel which was ranked third by the composite of the total sample.

As listed on the composite ranking of the total sample, Students did not include Individually Guided Instruction, Primary Education, School-Community Relations, Curriculum Development, Elementary School Guidance, Ineffective Teachers, Non-Graded Program, and Early Childhood. It is not too surprising that these graduating seniors did not look backward in their school career in the assignment of imperative needs. It is interesting that they added the following to the composite of the total sample ranking of needs: University Education, Program for Alienated Youth, Information on Careers and Occupations, Technical Education, Foreign Languages, Junior High School Guidance, Social Work, and Teacher Salaries.

TABLE XXIV

### Citizens

As shown on Table XXV, Citizens ranked Reading as the most imperative need in education and Education in Motivating and Guiding Pupils in second position. Their third and fourth priorities followed the total sample in assigning Teaching Personnel and Education in Diagnosing Pupil Needs to these ranks.

From the third rank on, the weighted totals do not differ greatly; however, the assignment of imperative needs differs greatly from the total sample from the fourth rank down. Citizens ranked Quality of Teacher Candidates fifth and Ineffective Teachers sixth. While not listed in the composite ranking of the total sample, they listed Community College Education seventh, followed by Individually Guided Instruction and School-Community Relations.

This sample of Citizens did not include Primary Education, Classroom Facilities, Curriculum Development, Program for Slow Learners, Elementary Guidance, Non-Graded Program, or Early Childhood in their composite list. They did add Community College Education, Trade and Industrial Education, English, University Education, and Long-Range Program Planning. This was the only group to include Teacher Turnover and Program for Academically Talented in their composite ranking.

### Urban

In designating a priority of educational needs, the Urban sample most resembles

TABLE XXV

COMPOSITE RANKING OF PERCEIVED EDUCATIONAL NEEDS
IN ALL CATEGORIES BY THE SAMPLE OF CITIZENS

EDUCATIONAL NEED	NU	MBER OF RANKING			WEIGHTED	
	FIRST	SECOND	THIRD	FOURTH	TOTALS	RANKS

Talented	2	3	2	2	23	14
Long-Range Program	_	-	_	_		
Planning	4	1	1	1	22	15

the composite of the total sample in ranking the first eight items. Reading again is the overwhelming first choice and Teaching Personnel a strong second choice. The weighted totals do not differ too greatly in ranking the other needs. The Urban sample does not include Classroom Facilities, Curriculum Development, Program for Slow Learners or Non-Graded Program in their composite ranking of needs, but, as shown on Table XXVI, does add Long-Range Planning, University Education, Program for Alienated Youth, and Teachers Salaries. Students were the only other group sample to include Program for Alienated Youth and Teachers Salaries.

#### Rural

Only in the designation of Reading as the first imperative not divide was there a sharp delineation in the composite ranking order of the Rural sample. As shown in Table XXVII, this sample omitted Early Childhood, which was included in the composite of the total sample and added, in last position, Trade and Industrial Education.

Except for the first two ranks, Reading and Education in Motivating and Guiding Pupils, the Rural sample assigned priorities quite differently than the composite of the total sample. Education in Diagnosing Pupil Needs, Classroom Facilities, and Non-Graded Program were included in the top five perceived needs, and Quality of Teacher Candidates, Primary Education, School-Community Relations, Elementary School Guidance, and Trade and Industrial Education were ranked last.

### Remote\_Rural

As shown in Table XXVIII, the weighted total for Reading was significantly the overwhelming first priority for the Remote Rural sample. Weighted totals indicate a more gradual ranking of other needs. Second priority was given to Education in Motivating and Guiding Pupils, Program for Slow Learners was third, and Teaching Personnel was fourth.

This was the only group to add Kindergarten to the list of the composite of the total sample, and it was given fifth rank.

The Remote Rural sample did not include Education in Diagnosing Pupil Needs, Individually Guided Instruction, Curriculum Development, Ineffective Teachers, or Non-Graded Program as were indicated by the composite of the total sample, but added Kindergarten, Trade and Industrial Education, English, and University Education. This was the only sample to add School Facility Planning as a perceived educational need.

#### Summary

Of the 15 imperative educational needs named in Table XXI, eight are aspects of the educational program, namely: Reading, Primary Education, Early Childhood Education, Elementary School Guidance, Curriculum Development, Non-Graded Program, Individually Guided Instruction, and Program for Slow Learners.

One of the needs pertains to school facilities, namely Classroom Facilities, and one pertains to School Community Relations. Five of the needs are related to the quality of teachers and teaching, these are: Education in Motivating and Guiding Pupils, Teaching Personnel (as a consideration of the budget), Education in Diagnosing Pupil Needs, Ineffective Teachers, and Quality of Teacher Candidates.

Some of the respondent groups did not include several of these 15 imperative needs, rather they emphasized other needs as imperative. Inspection of the following pages (Figure 13) illustrates these differences.

<u>N</u> e <u>e</u> ds	Rank of 1: Imperative Needs_	e School	_ Educators	 _ <u>S</u> t <u>u</u> d <u>e</u> n <u>t</u> s_			<u> </u>	Remote Rural

. Figure 13. Summary of Imperative Needs by All Groups and Geographic Areas

### CHAPTER IV

### CONCLUSIONS AND IMPLICATIONS

The general purpose of this study was to gather opinions from a sample population of school board members, students, citizens, and educators as to what they considered to be the imperative educational needs in the State of Nevada.

Such opinions were thought to be valuable in giving direction to policy decisions in the State regarding program planning and the allocation of funds.

A second general purpose was to determine the priorities given these needs by three geographic areas--Urban, Rural, and Remote Rural.

Finally, as in the 1969 State Assessment, this study sought to provide data for a statewide information system for the continuous assessment and evaluation of educational programs in the State.

Based on these objectives, it is concluded that this study was successful.

The specific conclusions drawn from the data should provide new insights and understandings for the State Department of Education, school districts and other agencies
throughout the State.

### <u>Conclusions</u>

Based upon the major findings of this study, it is concluded that:

1. There are certain educational needs in the State of Nevada that are

viewed by the respondent groups as imperative—that is, additional emphasis should be given to them. As perceived by all groups, these needs, in order of importance, are: Reading, Education in Motivating and Guiding Pupils, Teacher Personnel, Education in Diagnosing Pupil Needs, Individually Guided Instruction, Primary Education, Quality of Teacher Candidates, School Community Relations, Classroom Facilities, Curriculum Development, Program for Slow Learners, Elementary School Guidance, Ineffective Teachers, Non-Graded Program, and Early Childhood Education.

- 2. As perceived by School Board Members, the imperative needs, in order of priority, are: Reading, Education in Motivating and Guiding Pupils, Teaching Personnel, Evaluation of Teachers, Individually Guided Instruction, Quality of Teacher Candidates, Primary Education, School-Community Relations, Ineffective Teachers, Early Childhood, Classroom Facilities, Program for Average Pupils, Junior High School Education, Building Maintenance and Operation, and Education in Diagnosing Pupil Needs.
- 3. The priority of needs in the opinion of Educators is: Reading, Teaching Personnel, Curriculum Development, Primary Education, Education in Diagnosing Pupil Needs, Education in Motivating and Guiding Pupils, Non-Graded Program, Individually Guided Instruction, Teacher Involvement in Decision Making, Elementary School Guidance, Classroom Facilities, School-Community Relations, Early Childhood, Quality of Teacher Candidates, Program for Slow Learners.
- 4. The views of Students rank these needs as: Reading, University Education, Program for Slow Learners, Education in Motivating and Guiding Pupils, Education in Diagnosing Pupil Needs, Program for Alienated Youth, Class-room Facilities, Information on Careers and Occupations, Quality of Teacher Candidates, Technical Education, Foreign Languages, Teaching Personnel, Junior High School Guidance, Social Work, and Teacher Salaries.
- 5. Citizens regard the following as needing most emphasis: Reading, Education in Motivating and Guiding Pupils, Teaching Personnel, Education in Diagnosing Pupil Needs, Quality of Teacher Candidates, Ineffective Teachers, Community College Education, Individually Guided Instruction, School-Community Relations, Trade and Industrial Education, English, Teacher Turnover, University Education, Program for Academically Talented, and Long-Range Program Planning.

- 6. Respondent groups do not always agree regarding the priority that the various educational needs should receive. While the priorities of Students are most often at variance with those of the other respondent groups, marked differences appear between and among School Board members, Educators, and Citizens.
- 7. When members of the respondent groups are arranged by geographic areas, the order of priority of needs again differs from the perceptions of the total group.

The priority assignment of needs of the Urban areas is: Reading, Teaching Personnel, Education in Motivating and Guiding Pupils, Individually Guided Instruction, Education in Diagnosing Pupil Needs, Primary Education, School-Community Relations, Quality of Teacher Candidates, University Education, Elementary School Guidance, Ineffective Teachers, Long-Range Program Planning, Early Childhood, Teacher Salaries, Program for Alienated Youth.

The imperative needs of the Rural areas are: Reading, Education in Motivating and Guiding Pupils, Education in Diagnosing Pupil Needs, Classroom Facilities, Non-Graded Program, Teaching Personnel, Curriculum Development, Individually Guided Instruction, Program for Slow Learners, Ineffective Teachers, Quality of Teacher Candidates, Primary Education, School-Community Relations, Elementary School Guidance, and Trade and Industrial Education.

The Remote Rural areas designated five needs that were different than the 15 imperative needs assigned by all groups. Therefore, it is concluded that these areas of the State have special problems. The assignment of needs by the Remote Rural areas is: Reading, Education in Motivating and Guiding Pupils, Program for Slow Learners, Teaching Personnel, Kindergarten Education, Primary Education, School-Community Relations, University Education, English, Quality of Teacher Candidates, Early Childhood, School Facility Planning, Trade and Industrial Education, Elementary School Guidance, and Classroom Facilities.

8. All respondent groups and all areas of the State agree that reading is the first imperative need, and it is concluded that this subject should receive the greatest emphasis in decisions regarding the educational program of the State.

- It is also concluded that programs in Education in Motivating and Guiding Pupils, Diagnosing Pupil Needs, and Individually Guided Instruction should receive greater emphasis.
- Finally, it is concluded that problems concerning Teacher Personnel need consideration.

#### Implications

The conclusions drawn from the data gathered in this study suggest some implications relating to educational policy and for further research.

#### Implications for Educational Policy

The objectives and methodology of this study closely followed the 1969 Wisconsin Study. It is, therefore, proper to find similar implications for educational policy in this assessment. From the Wisconsin Study the following implication is appropriate:

It is of course clear that educational policy can never be derived directly from pooled opinions, however carefully they may be assessed. But in an informed democracy neither opinions nor perceptions can be ignored... The policy maker, then, must be in tune with prevailing opinions and perceptions and must reexamine his own opinions and perceptions in this light, recognizing that some degree of congruence is required for policy making to be attempted, accepted, and effective. 1

Future educational policy might well be guided by the major conclusions of this study. Each of the needs designated as most imperative by the respondent groups

<sup>&</sup>lt;sup>1</sup> Wisconsin, <u>op</u>. <u>cit</u>., p. 79.

should be carefully examined. As suggested by the Wisconsin Study, the following questions should be asked: "Why?" Once answered, this question leads the policy maker naturally to other relevant ones: "How?," "Who?," "How much?," "Where?," and "When?"<sup>2</sup>

Such questions should be applied to the reading program in Nevada's schools. What data are available to support or refute the concern of the respondents as expressed in this study? What data are needed by the policy maker to answer the "why" regarding this number one priority?

Another implication for educational policy is inherent in the differences of opinions of the respondent groups. Policy decisions must recognize these variances, and policy makers should seek more information from the various sources suggested by this study. It would certainly be useful to give attention to the perceptions of students regarding educational needs as this group most often deviated from the others in their opinions.

There is implicit in the conclusions regarding the differing needs of the Remote Rural areas--that these areas of the State have special problems that should be considered. Policies must recognize the differences among the geographic areas.

The concern expressed regarding practices related to motivation, guidance, diagnosis of needs, and individualized instruction of pupils is related to the

<sup>&</sup>lt;sup>2</sup> Ibid.

opinions regarding teachers and problems related to teaching personnel. There is an implication here for the need for more consideration regarding policies in the area of in-service education for teachers.

Finally it might be appropriate to examine the items which were not included in the final ranking of priority needs. For example, no item from the category Pre-Vocational and Occupational Programs was included. Does this mean that these programs are entirely successful, or is this area of little concern to the groups represented in this study?

#### Implications for Educational Research

A general purpose of this study was to provide information for the "continuous assessment and evaluation of educational programs in the State." Therefore, it would be inappropriate to suggest that attention be given to educational research. However, based on the findings of this study, several ideas for future directions are suggested.

- 1. The data of this study might be further analyzed in order to compare the opinions within the respondent groups. For example, do school board presidents perceive the educational needs the same as the newest board member? Do teachers and administrators have the same opinions? And, how do the perceptions of the various citizen groups agree or disagree?
- 2. It might also be fruitful to examine the opinions of the respondent groups within the geographic areas of the State. For example, how do the opinions of students differ in the Urban, Rural, and Remote Rural areas of the State?

- 3. In order to verify the findings of this study, it might be of value to replicate it before the end of the coming school year. A replication of this study might also be of value in the future in order to determine the progress made by educational programs in meeting the imperative needs indicated by the respondent groups.
- 4. Research is needed in order to determine why the educational needs were given the priority indicated by the rank order. Respondents could be asked the reasons for their rankings.
- 5. And finally, as suggested by the Wisconsin Study, answers to questions such as the following might be sought:

What historical, political, or economic factors in the larger society contribute to the priority rankings?, What demographic, social, or economic factors in the local district contribute to the rankings?, What factors in the nature and experiences of the respondent contribute to the rankings?, and Are either the current or the envisioned federal, state, and local programs directed toward the most imperative educational needs?

<sup>&</sup>lt;sup>3</sup> Wisconsin, <u>op</u>. <u>cit</u>., p. 83.

## Category 1. Subject Fields

The cards in this group have items which are subject fields that may be taught in your school system. Rank these items so that the item that needs the "most additional emphasis" will be the top card. Continue ranking the items so that the item that needs the "least additional emphasis" will be the bottom card.

a.	Science (General Science, Biology, etc.)
b.	Social Studies (History, Geography, Government, etc.)
c.	Vocational-Technical (Office, Agricultural, etc.)
d.	Matnematics (Arithmetic, Algebra, etc.)
e.	Industrial and Practical Arts (General Shop, Homemaking, etc.)
f.	Reading (Skills, Comprehension, etc.)
g.	Physical Education, Health and Safety Education
h.	Fine Arts (Music, Art, Drama)
i.	English (Language Arts)
i	Foreign Languages

## Category 2. <u>Level of Education</u>

The cards in this group have items which are levels of education that may be needed by individuals--anyone at all--in your school district. Rank these items so that the item that needs the "most additional emphasis" will be the top card. Continue ranking the items so that the item that needs the "least additional emphasis" will be the bottom card.

a.	Junior High School Education (Grades 7-9)							
b.	Post-Secondary Vocational-Technical Education							
c.	Adult Education							
d.	University Education							
e.	Early Childhood (3-4 year olds)							
f.	Senior High School Education (Grades 9-12)							
g.	Community College Education							
h.	Intermediate Level Education (Grades 4-6)							
i.	Kindergarten Education (5 year olds)							
j.	Primary Education (Grades 1-3)							

## Category 3. Pre-Vocational and Occupational Programs

The cards in this group have items which are kinds of pre-vocational and occupational programs which may be needed by individuals in your school district. Rank these items so that the item that needs the "most additional emphasis" will be the top card. Continue ranking the items so that the item that needs the "least additional emphasis" will be the bottom card.

a.	Vocational Agriculture (Off-Farm, Production, etc.)					
b.	Distributive Education (Merchandising, Sales, etc.)					
c.	Health Occupations Education (Nursing, Health Aides, etc.)					
d.	Office Occupations Education (Secretarial, Clerical, etc.)					
e.	Home Economics (Food and Child Care Services, etc.)					
f.	Basic Business Education (General Business, Business Exploratory, etc.)					
9.	Consumer and Homemaking (Buying, Clothing, etc.)					
h.	Technical Education (Electronics, Radio, T.V., etc.)					
i.	Trade and Industrial Education (Building Trades, Automotive, etc.)					
i.	Industrial Arts (Exploratory, General Shop, etc.)					

## Category 4. <u>Teacher Personnel</u>

The cards in this group have items which are concerns related to teacher personnel that may exist in your school district. Rank these items so that the item that needs the "most additional emphasis" will be the top card. Continue ranking the items so that the item that needs the "least additional emphasis" will be the bottom card.

a.	Methods of Teacher Selection
b.	Teacher Utilization and Specialization
c.	Teacher Involvement in Decision Making
d.	Ineffective Teachers
e.	Supply of Teacher Candidates
f.	Teacher Militancy
g.	Quality of Teacher Candidates
h.	Teacher Turnover
i.	Evaluation of Teachers
j.	Teacher Salaries

## Category 5. Administrative Services

The cards in this group have items which are administrative services that may be needed in your school district. Rank these items so that the item that needs the "most additional emphasis" will be the top card. Continue ranking the items so that the item that needs the "least additional emphasis" will be the bottom card.

a.	Long-range Program Plan <b>n</b> in
b.	Research and Evaluation
c.	Staff Personnel Services
d.	Pupil Personnel Services
e.	School-Community Relations
f.	School Facility Planning
g.	Curriculum Development
h.	Data Processing
i.	Business Management
i.	Supervision of Instruction

## Category 6. <u>Pupil Services</u>

The cards in this group have items which are kinds of services that may be needed for pupils in your school district. Rank these items so that the item that needs the "most additional emphasis" will be the top card. Continue ranking the items so that the item that needs the "least additional emphasis" will be the bottom card.

a.	School Health							
b.	Social Work							
c.	Junior High School Guidance							
d.	Psychological Testing and Referral							
e.	Achievement Testing							
f.	Follow-Up of Graduates							
g .	Elementary School Guidance							
h.	Educational-Vocational Placement							
i.	In-School Placement of Pupils							
j.	Information on Careers and Occupations							

_	
റ	4
7	п

## Category 7. Budget Allocations

The cards in this group have items which are categories of budget allocation in your school district. Rank these items so that the item that needs the "most additional emphasis" will be the top card. Continue ranking the items so that the item that needs the "least additional emphasis" will be the bottom card.

a.	Transportation							
b.	Supportive Personnel (Clerical, Aides, etc.)							
c.	Specialized Personnel (Counselors, Psychologists, Social Workers, etc.							
d.	Administrative and Supervisory Personnel							
e.	Classroom Facilities							
f.	Building Maintenance and Operation							
g.	Teaching Personnel							
h.	Libraries and Instructional Center Facilities							
i.	Textbooks and Instructional Supplies							
j.	Audio-Visual Equipment							

## Category 8. <u>Instructional Approaches</u>

The cards in this group have items which represent approaches to instruction that may be needed in your school district. Rank these items so that the item that needs the "most additional emphasis" will be the top card. Continue ranking the items so that the item that needs the "least additional emphasis" will be the bottom card.

a.	Individually Guided Instruction						
b.	Inquiry Approach (Discovery Method of Instruction)						
c.	Homebound Instruction						
d.	Computer Assisted Instruction						
e.	Television Assisted Instruction						
f.	Audio-Visual Instruction Other Than Educational TV						
g.	Non-Graded Program						
h.	Instructional Aides and Resource Persons						
i.	Staffing Patterns (Team Teaching, etc.)						
j.	Flexible Scheduling						

## Category 9. Educational Programs

The cards in this group have items which are educational programs that may be needed in your school district. Rank these items so that the item that needs the "most additional emphasis" will be the top card. Continue ranking the items so that the item that needs the "least additional emphasis" will be the bottom card

 _a .	Program	for	Average Pupils
 _b .	Program	for	Educationally Disadvantaged
 _c.	Program	for	High School Terminal Students
 _d.	Program	for	Alienated Youth (Potential Dropouts, Unmotivated, etc.
 _e .	Program	for	Academically Talented
 f.	Program	for	Culturally Distinct
 _g .	Program	for	Emotionally Disturbed
 h.	Program	for	Slow Learners
 _i.	Program	for	Mentally Handicapped (Trainable, Educable, etc.)
 _j.	Program	for	Physically Handicapped (Visual, Orthopedic, etc.)

### Category 10. In-Service Education

The cards in this group have items which are kinds of in-service education programs that may be needed by teachers in your district. Rank these items so that the item that needs the "most additional emphasis" will be the top card. Continue ranking the items so that the item that needs the "least additional emphasis" will be the bottom card.

a.	Educati <b>o</b> n	in	Varied Staffing Patterns (Team Teaching, etc.)
b.	Education	in	Student and Program Evaluation
c.	Education	in	Reporting Pupil Progress
d.	Education	in	Classroom Management
e.	Education	in	Group Dynamics and Human Relations
f.	Education	in	Motivating and Guiding Pupils
g.	Education	in	Subject Matter Content
h.	Education	in	Selecting and Utilizing Materials and Equipment
i,	Education	in	Diagnosing Pupil Needs
j.	Education	in	Planning Instruction and Developing Curriculum

1	$\sim$	$\sim$

### Question 11. All Categories

This last group of cards includes those cards you ranked first in each category. Now, using the same procedure as before, rank these ten cards so that the item on the card that needs the "most additional emphasis" will be on top and the item on the card that needs the "least additional emphasis" will be on the bottom.
